

Custom Coding & Automation Services

Python • JavaScript • Arduino • ESP32

Introduction

Hello,

I am a developer passionate about coding, automation and electronics. Over time, I have worked on different types of projects, combining software development with simple hardware systems, especially using Arduino and ESP32 platforms.

My goal is to create solutions that are not only functional, but also clear, efficient and easy to understand. I believe that good code should solve problems in a practical way, without unnecessary complexity.

I approach every project with attention to detail and a focus on delivering something that truly works in real scenarios.

Services

I offer support in the development of custom scripts and small systems, adapting each solution to the specific needs of the client. This can include writing scripts in Python or JavaScript, improving existing code, or building simple automation tools that help save time and simplify tasks.

I also work with Arduino and ESP32, creating programs that interact with LEDs, sensors and basic electronic components. Whether the request is software-based or a mix between software and hardware, I aim to provide a clean and reliable result.

Each project is handled with a practical mindset, focusing on what is actually needed to achieve the desired outcome.

Examples of Work

In my work, I often deal with tasks such as automating repetitive processes, developing small utilities, and solving specific coding problems. I also create simple embedded systems, where software interacts directly with hardware components like sensors or microcontrollers.

Another common area of work is debugging and improving existing code, helping transform incomplete or inefficient solutions into something stable and functional.

Every task, even the simplest one, is treated as an opportunity to deliver a solution that works properly and can be easily understood.

Why Choose Me

I focus on providing solutions that are both effective and easy to work with. Communication is an important part of my process, and I make sure to stay clear and responsive throughout the project.

I write clean and readable code, so that it can be maintained and understood even after delivery. I also try to keep things as simple as possible, avoiding unnecessary complexity and focusing on what really matters.

In addition, I provide support after delivery when needed, because my goal is not just to complete a task, but to make sure the result is actually useful.

Contact

If you have an idea or a project in mind, feel free to get in touch before placing an order.

I will help you understand the best approach and work with you to find a solution that fits your needs in a clear and practical way.
